

**Area Homeowners**

Your group is very much opposed to the proposed project. Some houses will be torn down. Noise will greatly increase during construction and after construction when cars and trucks are using the roadway. The safety of area children will be threatened by the increased amount of traffic. Pollution and litter from traffic will increase. Property values will greatly decrease. The project will change your life greatly for the worse; you can see no good point in this project.  
 What else might be important?

**John Heinz National Wildlife Refuge at Tincum Members**

You are opposed to the proposal because of the effects it will have on the environment. By draining the marsh, many of the animals will die. Fish, amphibians and reptiles will perish from the lack of water to live in, while many mammals and birds will die from the lack of fish, amphibians and reptiles for food. The disruption of the marsh will destroy the homes of many of the animals that live there. Once construction is completed, a few animals might return to the small remaining wetlands, but animal life in the Tincum Marsh will never be the same again. What other effects might there be?

**Philadelphia Planning and Development**

You are in favor of the project. The expressway will make it much easier for people to reach the city. This will encourage tourists to visit. Industries that rely on trucking (as opposed to shipping or the railroad) will be more likely to build their factories in Philadelphia. The highway will help to revitalize the city by increasing the number of jobs and by bringing more money into the community.  
 How else might this project help the citizens of your area?

**Airline Companies**

You are in favor of the project. The airport is very difficult to get to now because of the terrible roads. Many people no longer use the airport when they travel because of the traffic problems around it. By improving the roadways, people will use the airport. There will be more jobs available, such as parking lot attendants, luggage carriers, ticket salespersons and so forth.  
 What other factors might be important to airline companies?
